

ABSTRACT OF THE INVENTION

The present invention is particularly contemplated for using a web-based system to send religious tracts to recipients. The method of creating the tract provides the sender to input subject matter variables regarding the desired content

5 of the religious tract. Previously created phrases matching the subject matter variables are displayed to the sender from which they may select. The phrases that are displayed may be a word, group of words, sentence, paragraph, or complete tract. The sender may further include bible verses, hypertext links to other religious sites on the network, music, artwork, and others. The sender builds the tract using

10 the phrases and other desired information and then sends the tract to the recipient. The tract may be in the form of letters, stories, bible versus, poems, and the like to support and inspire the recipient. The service may be provided by a service provider such as a religious organization such as a local or regional religious organization, by a national or international organization, or both.
